In December 2012, Autodesk announced a major overhaul of the AutoCAD user interface, with the design being based on Dassault Systèmes BIMx platform, and the functionality

being similar to Adobe's new

The other day I
was scrolling through the Kindle

Channels and came across a book

by Laura Vanderkam, "How the

Best Companies Work". I read

some of it on the train and it's now

in my Goodreads top 100 for

business/self help. One of the things

she talks about is how companies are starting to behave differently. In the beginning companies could do whatever they want because of the fact that most of the time all they did was build and sell. But lately, companies have realized that people are concerned with more than just product - they want the product to be used and be easy to use.

Companies are starting to put a lot more focus into user experience and a lot less focus on functionality.

This leads to a much better product, but it also leads to companies doing

things like the following: *

- Providing free public transportation
- * Paying for your commute *
- Providing free showers or free coffee
- * Giving you free food *
- Giving you free healthcare *
- Supporting the environment in any way they can
- * Giving you free education
- * Paying for the best work environments

These things not only help build a better product, they help the people in the company. People who are happy in the workplace have happier families, and happier families are

much happier. It also makes it a lot
easier to find people who want
