Simple, intuitive, & free utility removes all of the unwanted applications (allowing you to keep a few selected ones) from your windows control panel. It allows you to uninstall programs that have not been uninstalled by your "normal" uninstall tool that comes with your operating system. It doesnt require any sort of installation - simply run the program and start removing applications. It is also useful for security if you share your computer with other users, or if you dont want to have to deal with a particular program the next time you install it. It is extremely easy to use. When a program is installed in your system, a "program" entry will appear in your control panel. Some uninstalled applications also create entries in the control panel. But the program itself can not be found in the control panel, (it may be in the system files folder). This program will show up as an entry in the Add/Remove Programs (found in your control panel, if not checked.) There are thousands of programs in the Add/Remove Programs, but most of the times only a couple of programs are chosen for removal. These programs can be chosen by right clicking on the entry in the control panel and choosing "Uninstall" or "Add/Remove Programs." So if you decide to keep a certain program, open the control panel, right click on the "program" entry and choose "Add/Remove Programs" and then select the program you want to keep. The program is ready to use. There is only one menu, and all its options are clearly displayed. Simply right click on the entry in the control panel and choose the option you want to use. Options: -Remove -Remove the program from your computer but dont delete the program files, delete the program files (this is the default option).-Keep -This option remembers the program you choose to keep, so you wont be able to remove it from the Add/Remove Programs until you uncheck it-Uninstall -This option will uninstall the program, and will remove all the files, including the program files (program files are not removed in windows systems when an program is uninstalled)-Remove every program in the add/remove -This option will remove every program in the add/remove applications list, including every program that comes with your computer. ...Read more Avere System Cleaner for Windows 10, 8.1, 8, 7, Vista, XP, Pentium, Core 2 Duo, Core i5, Core i3, Sandy Bridge, Has
