ageElemArr = _.map(ageElemArr, function(ageElement) { return {age: ageElement, caption: '...'}; }); But I'd like to know if there is any way to do this with the latest version of underscore. A: Since you want the browser to do the work and the later versions of underscore can now do this, I'd use the following which is just underscore-lite: var ageElemArr = ageElemArr.map(function(ageElement) { return _.object(ageElement); }); A: Try this. var ageElemArr = ['1', '2', '3', '4', '5', '6']; var ageElemArr = _.map(ageElemArr, function

All downloads are 100% virus-free, tested, and scanned.I have been running our server for a few weeks now, it has been flawless and with lots of updates. Which i have done every morning. It is also running on a dedicated server. We are losing network on our clients so we need to get this fixed. I believe we are running cPanel. As of April 2018 updates have been released to cPanel v21, will this fix our issues? Is this fix in build 2279? If so I need to order it off eWay.com.au... This is a follow up to my recent post. I have ran this script in many server, and it is the only thing that will get it working. We seem to have an issue with cron running and cron not always being listed in the running process. Sometimes it will work, sometimes it wont. I tried to update the script to take it even further, and that did not work. I have access to cpanel on all servers, and have tested this on each one and it works. our cpanel was last updated to v21 on April 1st of this year, the last time we updated was 7/2/18. I am now going to proceed with updating the server to the most current version. Can someone guide me through the process of updating. Our server is currently running v21.04.01. We are currently struggling with the crontab. It seems to be working

fine for the customers, but not for us. Can I have some help please. We are currently running on a dedicated server, and it is configured correctly. After a reboot, We are now getting errors, and we have no log. Hello, I have been having issues with my cron setup. I use a dedicated server managed by New SDH Host. I have been using crontab for a while, it worked fine until recently. I have recently updated to v21.04.02. All I get is, ERR_Access_Denied: Access to /usr/local/cpanel/cron/cron.cron is denied. Check the owner and permissions of the script. They are set to: Owner: www-data Group: www-data cpanel User: cPanel I have checked the logs, they have no reference 6d1f23a050
