## Ikm Java Questions 108

Today we are providing SQL Interview Questions and we have interviewed lots of candidates for various SQL Interview and we want to share those with you. We started SQL Interview Questions with SQL and we heard lot of questions. These are the SQL Interview Questions collected from our experience. These SQL Interview Questions are in a form of questions and answers format and you can prepare yourself for it. For example, you might need to retrieve data stored in one database and use it in a web page for printing. However, you might need to go through multiple databases in the future. For that scenario, you can use a Java application for connecting to all databases and performing the queries. JDBC is used for that purpose. Java is actually an open source language and it has been developed by Sun Microsystems and is quite a large subset of C and C++. C++ is a language developed by ISO committee and is the default language for embedded applications in many operating system environments. Since Java is open source and there are lot of benefits. Many companies have chosen to use Java as their programming language. Java is not only used for developing applications but there are lot of use cases where it comes in handy. Java allows multiple threads to execute. They may be accessing the same variable or object. Synchronization helps to execute threads one after another. It is important as it helps to execute all concurrent threads while being in sync. It prevents memory consistency errors due to access to shared memory. An example of synchronization code is- 5ec8ef588b
